

## Intermediate Health Screen

As with all of our health screens we have tailored them to fit your requirements. Our entry level Foundation Screens for the work place and the home are carried out by our qualified nurses. The Intermediate Screen is a doctor led health screen and is carried out at a centre near to your home or workplace.

**With all the benefits of our Foundation Screen; but carried out by a doctor we include from a sample of Blood:**

- A full Pathology Profile taking an in-depth look at your liver and kidney functions and a range of over 20 other tests.
- Cholesterol looking at your good and bad cholesterols

**From a Urine sample we will carry out:**

- A urinalysis looking at bladder infections and any signs of blood in the urine

With the blood test and a Resting ECG we will be able to give you a coronary risk score that will help in deciding if you require any important lifestyle changes.

**Further tests are conducted including:**

- Thyroid Function Test (blood sample - Female 40+)
- Prostate Cancer test (PSA, blood sample – Male 40+)
- Bowel Cancer Screen, Faecal Occult (Stool Sample – Male/Female 40+)
- Free Radical Testing (Urine Sample)
- Testicular Self Check
- Breast Awareness Training
- Cervical Smear
- HPV Test (Female)

Of course getting your results is very important too, you can view some of your results in graph format on line with MAIA and download a copy of your report. Don't forget you can also add your own results into MAIA to see how you are doing.

**For corporate discounts and further information please call Nick or Angie to arrange your health screens.**
